Gidole

Use

Tracking

I recommend increasing tracking for body text an decreasing it for headings.

Subsetting

A good idea for web use for faster load times unless you're using all 500+ characters.

Stylistic sets

1 a → ɑ
2 ʊ → u
3 y → y
4 l → l

License

The OFL license let's you do almost anything except selling the font alone. See license.txt for details.

Github

github.com/gidole

You don't have to be a typophile or programmer to contribute. Ideas and bug notifications are just as valuable to me as more advanced fixes. I've added a "help me" or "question" tag to issues where I need some input.

Format

I use Fontforge but I can easily update the UFO files if you'd rather use another editor.

Contribute

You can send me a zip but I prefer pull-requests. Make shure you are working on a branch and not master when creating pull requests.

Share

Social media

I'm very gratefull for you telling your friends/followers.

Blogs/news

Please link to gidole.github.io for futureproofing as the name and/or location of the zip might change.
You can use these screenshots. Please contact me if you have any questions.
You can use any buzzwords to describe the font but I'd rather you just show some pictures;)

Contributers

Greek 50% done - let me know on Github if you're Greek. I could use some feedback.

Cyrillic 0% done - need some advice before I start
